Climate Science in Your Classroom: Essential Teaching Strategies

Join us online for a course that explores the challenges and opportunities of teaching about climate science and related topics in your classroom. This course, which can be taken for no cost or for 3 credit hours of recertification or graduate credit, will be an intensive overview of climate science and effective pedagogy.

The course's engaging webinar platform emphasizes group discussions, collaborative learning and interactivity. This course will require that you develop and implement a climate science unit or section of your choosing, with support from other teachers and instructors in the class.

Objectives

- Find High Quality Resources
- Aligning to Standards and Integrating with Curricula
- Assess and Develop Content Knowledge
- Develop Action Plan to Forestall or Address Controversy
- Foster Professional Learning Community
